

SW2.5 Wood Stove

FEATURES

Breckwell wood stoves are the perfect option for keeping toasty overnight. Approved in the US and Canada, the SW2.5 takes logs up to 21" and has an output of up to 112,000 BTUs so you'll always be warm. And with only 0.88 gph emission, you'll feel relaxed, knowing you are being kind to the environment. No electricity, no problem. A wood-burning Stove provides heat and light, even without electricity. There's nothing like building a fire—real wood, the smell, the sound, the sight. With the air-washed, mirrored glass of the large SW2.5, you'll have a wonderful view of the crackling fire as you relax in the warmth. A thermostatic blower is an additional option for increasing the comforting heat.

Up to 2,500 sq. ft.
